

GUIDE TO DILUTION RATES

HOW TO USE THIS CHART

This chart shows how to mix common dilution rates into different containers.
The chart gives the approximate number of measuring cups, pumps or caps required to dispense the correct amount of neat product. *N.B. Always add product to water.*

Chemical Measure

Water Container

Amount of Water

SAFETY

- It is important to follow all safety instructions
- Always read the instruction label and use as recommended
- Never mix cleaning chemicals
- After use, all measures must be rinsed with water
- Do not use food or drink containers to measure or store cleaning chemicals
- Dispose of unused cleaning solution as soon as the job is completed, and wash out all containers with water
- Trigger sprays must be labelled with the contents and the dilution ratio
- If in doubt, dispose of unknown solution and prepare fresh.

Dilution Ratio	NUMBER OF CAPS	NUMBER OF CAPS	NUMBER OF PUMPS	NUMBER OF PUMPS	NUMBER OF PUMPS	NUMBER OF CUPS	NUMBER OF CUPS	NUMBER OF CUPS
1 part Product to 1 parts Water 1:1								
1 part Product to 5 parts Water 1:5			4			5		
1 part Product to 10 parts Water 1:10			2			2½	5	
1 part Product to 25 parts Water 1:25			1			1	2	
1 part Product to 50 parts Water 1:50				4		½	1	
1 part Product to 100 parts Water 1:100	4			2	4		½	5
1 part Product to 200 parts Water 1:200	2	4		1	2			2½
1 part Product to 400 parts Water 1:400	1	2			1			1
